Siemens Quick Ship Program

The Siemens Advantage

Accidents, floods, even bad luck- you cannot anticipate emergencies, but you can plan for them. When your electrical distribution system suffers damage and you need an expedited replacement then look no further than the Siemens Quick Ship Program for switchgear, switchboards, and panelboards. This program leverages Siemens experience, engineering, expertise, and component availability to offer even the most complex switchboards in hours or days- not weeks and months.

When there is no time for downtime... Think Siemens!

Siemens Grand Prairie, TX facility has been producing complex switchboards since 1995 and houses a highly trained and experienced core of order engineers who can work with you to develop a custom switchboard that meets your needs- in the time frame you need it. The consolidated component inventory at this facility allows Siemens to offer hard-to-find options. Siemens has the parts, engineering horsepower, and available resources to produce complex switchboards when you need them.

Looking for panelboards or less complex switchboards a little closer to home? Siemens offers regional facilities that can assist! Are you compressed for time and need to get power distribution on site quickly, but don't have time to issue a specification? Siemens offers 14 pre-configured designs that can have you up and running in no time!

Quick Ship Program Options

The Quick Ship Program includes numerous configurations including, but not limited to:

- Main-Tie-Main Options
- Integrated Power Switchboards (combining transformers, panelboards into a switchboard)
- GenReady Switchboards for use in connecting generators
- NEMA 3R Options
- Any many, many more!

Speak with your local Siemens Sales Engineer for more information.

Siemens Quick Ship Program in action!

In the fall of 2012 Hurricane Sandy came ashore just north of Atlantic City, NJ flooding streets, tunnels, subway lines, and cutting power to millions. Just a few short months earlier Siemens had shipped main portions of the World Trade Center site gear. Siemens sales representatives were on site the day after the storm, but could not reach the gear- the lower portions of the site were submerged.

Siemens was asked to help replace the damaged gear- and we responded. The complex gear and busway systems that had taken months to plan, build, and transport were replaced in fractions of the original lead time.

When the emergency hits... Think Siemens!

Siemens stands ready to assist you with the capabilities you need when replacing electrical distribution equipment.

Contact your local Siemens sales representative or distributor for more information.
